

## WeldTech 7002

### WeldTech 7002

Welding machine for the heating element butt welding of PE, PP, PVC, and PVDF pipes and fittings from 200mm up to 630mm. Based on a steel frame with electro-hydraulic adjusting device for the control and application of the welding pressure, planer with electrical chain drive in a closed aluminium housing, external chip removal, holding bracket for the heating element, adjustable timer. Basic clamping tool selectable in small steel or large version (without diameter depending reduction inserts) swivelling on each side up to 15° (with the large version even possible up to 22.5° upon changing the basic clamping tool) for the welding of segmented bends and fittings. The right-hand clamping tool is axially movable for adjustment of diameter tolerances. In supporting the welding force application a second cylinder is available optionally and mounted on the upper clamping tool when needed. Special clamping tools are available for the fabrication of T-pieces 90°, 45°, 60° and cross-pieces. The machine in its manual version can be obtained with the WeldTech SPA weld log recorder (see page 20) or with the WeldTech CNC control (see page 21).

Set composition Description	Qty.	kg	Order-no.
WeldTech 7002 set composition:			
description			
basic machine with sub-construction with planer (400 V/2200 W) and electronic heating element (400 V/10000 W), built-in electrical hydraulic aggregate			
reduction inserts according to version of basic clamping elements (steel version with/large version without pipe supports) OD 200 - 560			
stubend holder			
second additional working cylinder			
clamping cylinder for clamping tool
